# PET SERIES SUPER QUIET DUST SYSTEMS

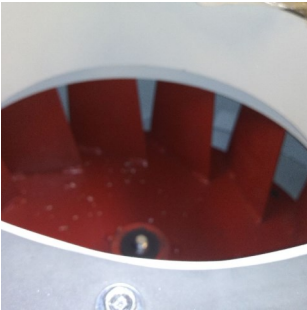

## PET DC SERIES 10-15-20 HP

2

**PET Series Super Quiet Dust Systems** come as a complete fully functional system designed to manage dust extraction at a reduced cost. You provide the piping and we handle the rest. Units come ready to install with motor starter, and input connection flange. Once received just assemble and collect dust. With three sizes to accommodate most small to large shops. Machines are rated at 10, 15 and 20 HP!

**MOTOR STARTER:** Most machines fall short of getting you up and running. We took the approach of providing a complete system ready to connect to your dust piping. Each unit has included in the price, the correctly rated motor starter for quick system installation.

**SUPER QUIET FANS:** The integration of the larger super quiet fan allows for reduced RPM. This reduction provides you with a system you can be around. You no longer have the issue of fan noise overtaking the production environment. With the large fan, speeds can be reduced, lower RPM's of only 1750 rpm can be achieved. Many of the collectors on the market use much smaller fans and typically have a rpm range of 4800, 5400 or 6800rpm which greatly increases the noise level of the collector.

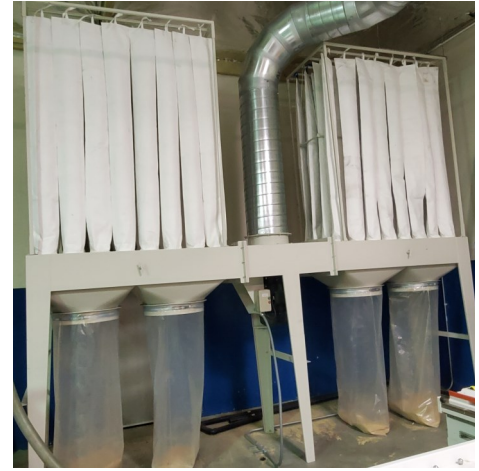

**20 HP UNITS:** 4 bag collection which utilizes frame as plenum for dust extraction and return air. Single assembly allows a more compact design. Large capacity collection bags for longer run time between chip removal.
