RADIAL-ARM SAW  
MODEL 50-A**

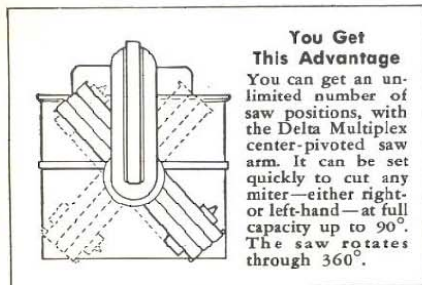

# Only The Delta-Multiplex Radial Arm Saw Has All These Features

The New Delta Multiplex Radial-Arm Saw Model 50-A is a big machine designed to handle large, heavy work . . . faster, more accurately and with greater ease of operation. It gives you a wider range of cuts because of its patented center pivot track. All cuts are made with the saw blade practically in the center of the table. This reduces resetting and adjustment time and permits an unlimited number of saw positions, giving you a full-length cut at any angle.

Cross Cutting, Ripping, Dadoing, Rafter Notching, etc., are especially fast and easy with the Delta Multiplex because the saw yoke is mounted on two rows of smooth running ball bearings.

The saw blade is directly connected to the motor and relatively large saw blades can be used without power loss through friction of gear trains or belts.

Construction companies, contractors, builders, lumber yards, government agencies, etc., all find the Delta Multiplex the most efficient of any Radial-Arm Saw. Check all of its features and you will see why. No other Radial-Arm Saw has all these features. Features that mean higher production, lower costs, and greater all-around ease of operation for you.

### You Get This Advantage

You can get an unlimited number of saw positions, with the Delta Multiplex center-pivoted saw arm. It can be set quickly to cut any miter—either right- or left-hand—at full capacity up to 90°. The saw rotates through 360°.

### Only With Delta Multiplex Can You Cut Full-Length Miters At Any Angle

With the Delta Multiplex Radial-Arm Saw left-hand miters are easily cut in the same 100% range as right-hand miters. Difficult cuts are made with the saw blade practically in the center of the table—an exclusive Delta Multiplex feature not found in any other Radial-Arm saw.

1. All cuts made practically in center of table—a feature not found in any other Radial-Arm Saw.
2. Cuts *full length* left-hand miters as well as right-hand miters.
3. All adjustments to the front of machine—added conveniences—greater safety.
4. Movable table permits full usable travel of cutting head in any position.
5. Center suspended track provides greater capacity and adaptability.
6. Ball bearing track gives greater accuracy and ease of cutter head operation.
7. Carefully calibrated, eye level scales permit quick, accurate setups.
8. Self-retracting guard offers added protection—adjusts to any position of saw.
9. Motor rotates full 90° horizontally—for added positions and operations.
10. Aluminum castings mean lighter, easier handling machine.
11. Start and stop control panel conveniently at front side of base.
12. Metal cabinet base provides convenient storage space for saws, tools, etc.

### SPECIFICATIONS

Horsepower.....	3, 5, 7½ & 10
R.P.M.....	3600
Dia. of Saw Blade.....	16"
Dia. of Saw Arbor.....	1"
Length of Saw Arbor.....	2¾"
Travel of Cutting Head.....	22" or 30"
Kind of Track.....	Ball Bearing
Type of Table Top.....	Hardwood
Width of Table Top.....	29"
Length of Table Top.....	48"
Table Travel.....	16"
Max. Clearance Motor to Table.....	14"
Max. Vertical Adjustment.....	12¾"
Range of Miter Adjustment.....	360°
Range of Bevel Adjustment.....	90°
Max. Depth of Cut—12" Blade.....	2"
Max. Depth of Cut—14" Blade.....	3"
Max. Depth of Cut—16" Blade.....	4"
Max. Depth of Cut—20" Blade.....	6"
Width of Rip to Front Fence.....	15"
Width of Rip to Rear Fence.....	26"
Cross Cut (30" track).....	1"–26"
(22" track).....	1"–18"
Miter Capacity.....	0-90° R. or L.
Dia. of Routing Circle (30" track).....	34"
(22" track).....	24"
Overall Height.....	60"
Width.....	48"
Depth.....	38"
Shipping Weight (30" track).....	690 lbs.
(22" track).....	660 lbs.
