Our laser was an old style tube that is not made anymore. Replaced with a new style tube which is more robust. Old tube was not performing to spec. RF1000 supply also had old style components which were underperforming - this led to the laser not working. They found that the customer mounted optics had smoke damage. Need to be sure that the air extraction system is always working. If smoke gets on the optics it can create hot spots. Need to periodically check the optics to be sure they are clean. The laser and RF controller are a matched set - they need to be compatible. Both were upgraded. Average output in their testing was 125 watts from a 100 watt laser. Not a bad idea to shroud the laser box when not using it.
